[2006 Data Summary Report for Emergency Treatment at the Leviathan Mine.pdf](#)

Hello Mr McGrath,

Back in 2008, I did an acid mine drainage treatment project at the American Tunnel and directly below at Cement Creek. I did this work for the Forest Service and EPA to show that my mobile equipment could successfully treat the AMD on site and use less lime than conventional systems. I was primarily working with Karl Ford (USFS) and David Reisman (EPA ORD).

Over the weekend Karl Ford contacted me regarding the issue with the Gold King Mine and suggested that I contact you. My specialty is treatment of acid mine drainage and I have successfully completed several emergency treatment projects over the years.

I have attached, a report for an emergency treatment project that I have conducted several times for the state of California. The situation is very similar to the Gold King scenario. I have also attached my resume, which shows other projects that are relevant. I have emergency treatment equipment that can be mobilized very quickly and respond to . Please let me know if you have any questions or would like to discuss the project further.

Best Regards,
